SUBJECT INDEX

Aerial images, relaxation matching applied to, 207
Algorithm development, autonomous acquisition simulator system: a testbed for tactical image processing, 66
Algorithms and hardware technology for real-time classification and target detection of military vehicles, 38
Algorithms for low-level scene analysis: applications of polar exponential grid (PEG) representation to high-speed, scale-and-rotation invariant target segmentation, fast adaptive, 47
Application of image understanding to automatic tactical target acquisition, 26
Applications of image understanding to industrial automation, overview of, 134
Applications of image understanding, reconnaissance, 80
Applications of moments to image understanding, 126
Array processing simulation, cellular, 58
Automatic reconnaissance-based target-coordinate determinations, 95
Automatic tactical target acquisition, application of image understanding to, 26
Automatic target classification, dimensional, 116
Automatic visual inspection of metal surfaces, 176
Automation, overview of applications of image understanding to industrial, 134
Autonomous acquisition simulator system: a testbed for tactical image processing algorithm development, 66

Bootstrap stereo error simulations, 306
Boundaries, interpretation of geometric structure from image, 224

Calibration with image sequences, procedure for camera, 339
Camera calibration with image sequences, procedure for, 339
Cellular array processing simulation, 58
Charting, and geodesy (MC&G) applications of digital image pattern recognition, Defense Mapping Agency (DMA) overview of mapping, 11
Chip for computer vision with fault-tolerant hardware, general purpose very large scale integration (VLSI), 342
Classification, dimensional automatic target, 116
Classification and target detection of military vehicles, algorithms and hardware technology for real-time, 38
Coherence, edge evaluation using local edge, 284
Computational models for texture analysis and synthesis, 254
Computer-assisted photo interpretation research at United States Army Engineer Topographic Laboratories (USAETL), 85
Computer vision with fault-tolerant hardware, general purpose very large scale integration (VLSI) chip for, 342
Control for robot handling of unoriented parts, visual, 169
Control of tactical target cueing, intelligent, 32

Data base, registration of a synthetic aperture radar (SAR) reconnaissance image with a map reference, 110
Data base support for automated photo interpretation, 192
DARPA image understanding research program, summary of the, 2
Defense Mapping Agency (DMA) overview of mapping, charting, and geodesy (MC&G) applications of digital image pattern recognition, 11
Detection in infrared imagery, Hough transform for target, 105
Detection of military vehicles, algorithms and hardware technology or real-time classification and target, 38
Determining the instantaneous direction of motion from optical flow generated by a curvilinearly moving observer, 199
Determining optical flow, 319
Digital image pattern recognition, Defense Mapping Agency (DMA) overview of mapping, charting, and geodesy (MC&G) applications of, 11
Dimensional automatic target classification, 116

Edge evaluation using local edge coherence, 284
Edge pyramids and edge quadtrees, two hierarchial linear feature representations:, 274
Error simulations, bootstrap stereo, 306

Fast adaptive algorithms for low-level scene analysis: applications of polar exponential grid (PEG) representation to high-speed, scale-and-rotation invariant target segmentation, 47
Fault-tolerant hardware, general purpose very large scale integration (VLSI) chip for computer vision with, 342
Feature representations: edge pyramids and edge quadtrees, two hierarchial linear, 274
Flow, determining optical, 319
Flow generated by a curvilinearly moving observer, determining the instantaneous direction of motion from optical, 199

General purpose very large scale integration (VLSI) chip for computer vision with fault-tolerant hardware, 342
Geodesy (MC&G) applications of digital image pattern recognition, Defense Mapping Agency (DMA) overview of mapping, charting, and, 11
Geometric constraints for interpreting images of common structural elements: orthogonal trihedral vertices, 332
Geometric modeling in vision for manufacturing, 141
Geometric structure from image boundaries, interpretation of, 224
Grid (PEG) representation to high-speed, scale-and-rotation invariant target segmentation, fast adaptive algorithms for low-level scene analysis: applications of polar exponential, 47

Hardware, general purpose very large scale integration (VLSI) chip for computer vision with fault-tolerant, 342
Hardware technology for real-time classification and target detection of military vehicles, algorithms and, 38
Hierarchial linear feature representations: edge pyramids and edge quadtrees, two, 274
High-speed, scale-and-rotation invariant target segmentation, fast adaptive algorithms for low-level scene analysis: applications of polar exponential grid (PEG) representation to, 47
Hough transform for target detection in infrared imagery, 105

Image boundaries, interpretation of geometric structure from, 224
Image with a map reference data base, registration of a synthetic aperture radar (SAR) reconnaissance, 110
Image motions, relative depth and local surface orientation from, 232
Image pattern recognition, Defense Mapping Agency (DMA) overview of mapping, charting, and geodesy (MC&G) applications of digital, 11
Image processing algorithm development, autonomous acquisition simulator system: a testbed for tactical, 66
Image processor for very large scale integration (VLSI) implementation, residue-based, 346
Image sequences, procedure for camera calibration with, 339
Image smoothing and segmentation, multiresolution pixel linking for, 217
Image understanding, applications of moments to, 126
Image understanding to automatic tactical target acquisition, application of, 26
Image understanding to industrial automation, overview of applications of, 134
Image understanding, reconnaissance applications of, 80
Image understanding research program, summary of the DARPA, 2
Imagery, Hough transform for target detection in infrared, 105
Images of common structural elements: orthogonal trihedral vertices, geometric constraints of interpreting, 332
Images, model-based three-dimensional interpretations of two-dimensional, 311
Images, relaxation matching applied to aerial, 207
Industrial automation, overview of applications of image understanding to, 134
Industrial example, real-time pattern recognition—an, 160
Infrared imagery, Hough transform for target detection in, 105
Inspection of complex and repetitive patterns, nonreference optical, 182
Inspection of metal surfaces, automatic visual, 176
Integration (VLSI) chip for computer vision with fault-tolerant hardware, general purpose very large scale, 342

Integration (VLSI) implementation, residue-based image processor for very large scale, 346
Intelligent control of tactical target cueing, 32
Interpretation, data base support for automated photo, 192
Interpretation of geometric structure from image boundaries, 224
Interpretation research at United States Army Engineer Topographic Laboratories (USAETL), computer-assisted photo, 85
Interpretations of two-dimensional images, model-based three-dimensional, 31

Line finding with subpixel precision, 211
Low-level scene analysis: applications of polar exponential grid (PEG) representation to high-speed, scale-and-rotation invariant target segmentation, fast adaptive algorithms for, 47

Map reference data base, registration of a synthetic aperture radar (SAR) reconnaissance image with a, 110
Mapping, charting, and geodesy (MC&G) applications of digital image pattern recognition, Defense Mapping Agency (DMA) overview of, 11
Marr and Poggio stereo matcher, towards a real time implementation of the, 299
Matching applied to aerial images, relaxation, 207
Metal surfaces, automatic visual inspection of, 176
Military vehicles, algorithms and hardware technology for real-time classification and target detection of, 38
Model-based three-dimensional interpretations of two-dimensional images, 311
Modeling in vision for manufacturing, geometric, 141
Models for texture analysis and synthesis, computational, 254
Moments to image understanding, applications of, 126
Motion from optical flow generated by a curvilinearly moving observer, determining the instantaneous direction of, 199
Motions, relative depth and local surface orientation from image, 232
Multiresolution pixel linking for image smoothing and segmentation, 217

Nonreference optical inspection of complex and repetitive patterns, 182

Optical flow, determining, 319
Optical flow generated by a curvilinearly moving observer, determining the instantaneous direction of motion from, 199
Optical inspection of complex and repetitive patterns, nonreference, 182
Orientation from image motions, relative depth and local surface, 232
Orthogonal trihedral vertices, geometric constraints for interpreting images of common structural elements:, 332
Overview of applications of image understanding to industrial automation, 134
Overview of mapping, charting, and geodesy (MC&G) applications of digital image pattern recognition, Defense Mapping Agency (DMA), 11

Pattern recognition, Defense Mapping Agency (DMA) overview of mapping, charting, and geodesy (MC&G) applications of digital image, 11
Pattern recognition—an industrial example, real-time, 160
Patterns, nonreference optical inspection of complex and repetitive, 182
Photo interpretation, data base support for automated, 192
Photo interpretation research at United States Army Engineer Topographic Laboratories (USAETL), computer-assisted, 85
Pixel linking for image smoothing and segmentation, multiresolution, 217
Poggio stereo matcher, towards a real time implementation of the Marr and, 299
Polar exponential grid (PEG) representation to high-speed, scale-and-rotation invariant target segmentation, fast adaptive algorithms for low-level scene analysis: applications of, 47
Precision, line finding with subpixel, 211
Procedure for camera calibration with image sequences, 339
Processing algorithm development, autonomous acquisition simulator system: a testbed for tactical image, 66
Processing simulation, cellular array, 58
Processor for very large scale integration (VLSI) implementation, residue-based image, 346
Pyramids and edge quadtrees, two hierarchial linear feature representations: edge, 274

Quadtrees, two hierarchial linear feature representations: edge Pyramids and edge, 274

Radar (SAR) reconnaissance image with a map reference data base, registration of a synthetic aperture, 110
Real-time classification and target detection of military vehicles, algorithms and hardware technology for, 38
Real time implementation of the Marr and Poggio stereo matcher, towards a, 299
Real-time pattern recognition—an industrial example, 160
Recognition, Defense Mapping Agency (DMA) overview of mapping, charting, and geodesy (MC&G) applications of digital image pattern, 11
Recognition—an industrial example, real-time pattern, 160
Reconnaissance applications of image understanding, 80
Reconnaissance-based target-coordinate determinations, automatic, 95
Reconnaissance image with a map reference data base, registration of a synthetic aperture radar (SAR), 110
Registration of a synthetic aperture radar (SAR) reconnaissance image with a map reference data base, 110
Relative depth and local surface orientation from image motions, 232
Relaxation matching applied to aerial images, 207
Repetitive patterns, nonreference optical inspection of complex and, 182
Representations: edge pyramids and edge quadtrees, two hierarchial linear feature, 274
Residue-based image processor for very large scale integration (VLSI) implementation, 346

Scene analysis: applications of polar exponential grid (PEG) representation to high-speed, scale-and-rotation invariant target segmentation, fast adaptive algorithms for low-level, 47
Segmentation, fast adaptive algorithms for low-level scene analysis: applications of polar exponential grid (PEG) representation to high-speed, scale-and-rotation invariant target, 47
Segmentation, multiresolution pixel linking for image smoothing and, 217
Sequences, procedure for camera calibration with image, 339
Simulation, cellular array processing, 58
Simulations, bootstrap stereo error, 306
Simulator system: a testbed for tactical image processing algorithm development, autonomous acquisition, 66
Smoothing and segmentation, multiresolution pixel linking for image, 217
Stereo matcher, towards a real time implementation of the Marr and Poggio, 299
Structural analysis of natural textures, 246
Subpixel precision, line finding with, 211
Summary of the DARPA image understanding research program, 2
Surfaces, automatic visual inspection of metal, 176
Synthetic aperture radar (SAR) reconnaissance image with a map reference data base, registration of a, 110

Tactical image processing algorithm development, autonomous acquisition simulator system: a testbed for, 66
Tactical target acquisition, application of image understanding to automatic, 26
Tactical target cueing, intelligent control of, 32
Target acquisition, application of image understanding to automatic tactical, 26
Target classification, dimensional automatic, 116
Target-coordinate determinations, automatic reconnaissance-based, 95

Target cueing, intelligent control of tactical, 32
Target detection in infrared imagery, Hough transform for, 105
Target detection of military vehicles, algorithms and hardware technology for real-time classification and, 38
Target segmentation, fast adaptive algorithms for low-level scene analysis: applications of polar exponential grid (PEG) representation to high-speed, scale-and-rotation invariant, 47
Technology for real-time classification and target detection of military vehicles, algorithms and hardware, 38
Testbed for tactical image processing algorithm development, autonomous acquisition simulator system: a, 66
Texture analysis and synthesis, computational models for, 254
Textures, structural analysis of natural, 246
Three-dimensional interpretations of two-dimensional images, model-based, 311
Two-dimensional images, model-based three-dimensional interpretations of, 311
United States Army Engineer Topographic Laboratories (USAETL), computer-assisted photo interpretation research at, 85
Unoriented parts, visual control for robot handling of, 169
Vehicles, algorithms and hardware technology for real-time classification and target detection of military, 38
Vertices, geometric constraints for interpreting images of common structural elements: orthogonal trihedral, 332
Vision with fault-tolerant hardware, general purpose very large scale integration (VLSI) chip for computer, 342
Vision for manufacturing, geometric modeling in, 141
Visual control for robot handling of unoriented parts, 169
Visual inspection of metal surfaces, automatic, 176
